

FRONT PANELS

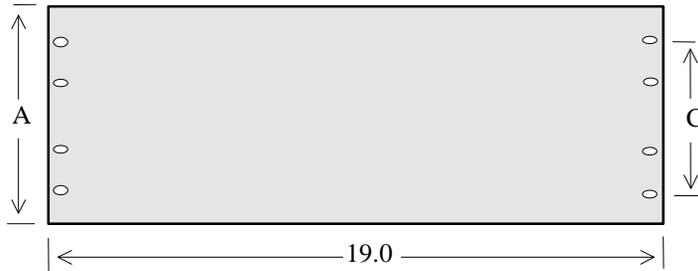

50 SERIES

These standard blank panels are carefully fabricated to meet the specifications of EIA standards. The brushed aluminum with 0.125" and .18" thick (5052-H32 material) front panels are anodized, alodine and painted finish. Steel panels and formed panels are painted only.

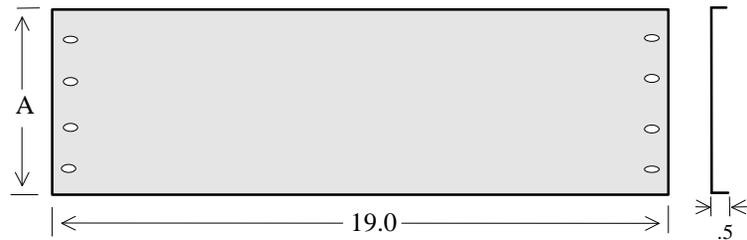

The brushed aluminum front panels with anodized finish have very high corrosion resistance and best appearance.

The formed panels are added to our vertical racks and other standard racks as filler panels or back panels. They are made from 16 gauge cold roll steel with reinforced bend on top and bottom edges.

Ordering your front panels is as easy as ordering our regular enclosures. Just use the stock numbers shown below and indicate with the suffix - X what choice finish you want. These front panels can also be used as filler panels for any other standard racks. Please call for vented panels or custom sizes.

50/51/53 Series

56 Series

Suffix -x

- A gold alodine
- B black anodize
- C clear anodize
- E painted beige
- G painted gray
- N clear alodine
- P painted black
- R painted blue
- U unfinished
